

On 10/17/77, a part of the out rock section of the canyon, about 1000' long, in a 1/2 mile by 1/2 mile area, was bulldozed and destroyed. This was done by the U.S. Forest Service.

The following are the results of the survey of the
 section of the river from the point of the
 survey to the point of the survey. The results of the
 survey are as follows: The river is about 100 feet
 wide at the point of the survey. The river is about
 100 feet wide at the point of the survey. The river is
 about 100 feet wide at the point of the survey. The
 river is about 100 feet wide at the point of the
 survey. The river is about 100 feet wide at the
 point of the survey. The river is about 100 feet
 wide at the point of the survey. The river is about
 100 feet wide at the point of the survey. The river
 is about 100 feet wide at the point of the survey.

the β phase of the polymer. The β phase is the more ordered phase and is characterized by a higher density and a higher melting point than the α phase. The β phase is also the more stable phase and is the one that is most commonly observed in nature. The α phase is the less ordered phase and is characterized by a lower density and a lower melting point than the β phase. The α phase is also the less stable phase and is the one that is most commonly observed in nature.

1. *Pharmaceutical industry* – The pharmaceutical industry is the largest of the three industries, with sales of \$10.5 billion in 1997. It is the only industry that has not experienced a decline in sales since 1990. The industry is dominated by a few large firms, with the top five firms accounting for 40% of sales. The industry is highly competitive, with many firms competing for market share.
