

ALTA SURVEY

NOTES CORRESPONDING TO SCHEDULE 1

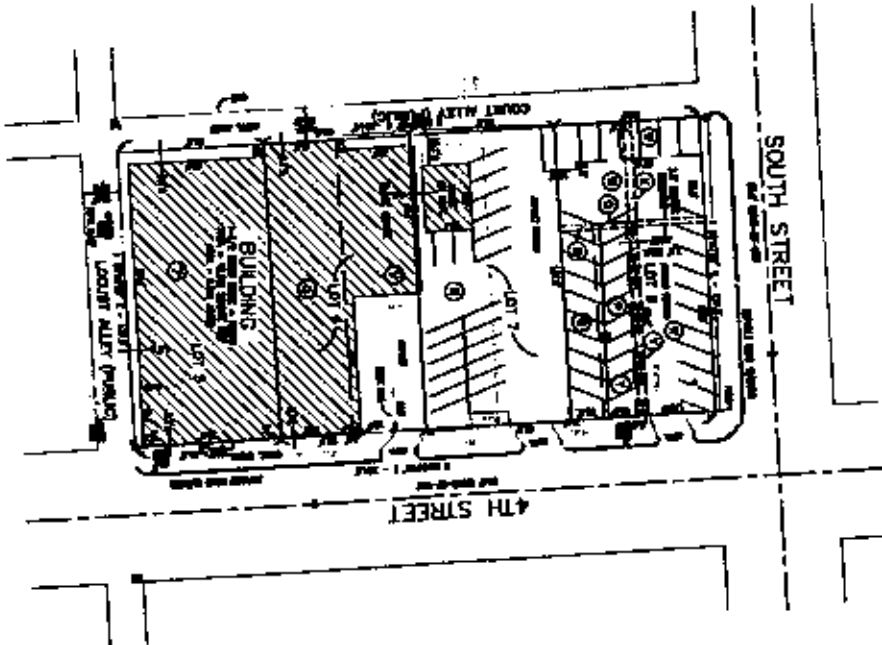

1. The first step in the process of the investigation is to identify the problem or issue that needs to be addressed. This involves gathering information about the situation and determining the scope of the investigation.
2. Once the problem is identified, the next step is to develop a plan of action. This plan should outline the objectives of the investigation, the methods to be used, and the timeline for completion.
3. The third step is to collect data. This involves gathering information from various sources, including interviews, observations, and documents. The data should be organized and analyzed to identify patterns and trends.
4. The fourth step is to interpret the data. This involves drawing conclusions from the data and identifying the causes of the problem. It is important to consider alternative explanations and to be open to new information.
5. The final step is to report the findings. This involves writing a report that summarizes the results of the investigation and provides recommendations for action. The report should be clear, concise, and easy to understand.
